1. Spill Control

○ None

○ Containment AST ○ Dbl Wall/Bottom ○ Dike Area ○ Remote Impound ● in Building

2. CRDM (Continuous Release Detection Method)

○ None

● **RPB (Release Prevention Barrier)**

Type ● Concrete Pad ○ Liner ○ Steel Plate ○ Other _____

○ **Double Wall/Bottom** with Interstitial Space

○ OK ○ Not OK ○ Not Checked

○ **Elevated**

3. AST Category

Category _1_

1 Any Tank with Both Spill Control and CRDM

2 Single wall AST in contact with ground NO CRDM Has Spill Control

3 Single wall AST in contact with ground has CRDM NO Spill Control

Vertical AST on concrete pad CRDM has NO Spill Control

Single/Double wall AST Has CRDM NO Overfill Protection

4. Venting

☐ Open vents not elevated 12 feet ☒ Open vents not vented outside building

☐ Uses long bolted Manway as emergency vent ☐ Vapor recovery system

Primary Vent ● Open ○ Pressure/Vacuum ○ Pressure Size: _8.00”_____

Secondary Vent ○ Open ○ Pressure/Vacuum ○ Pressure Size: _____

Emergency Vent ○ Open ○ Pressure/Vacuum ○ Pressure Size: _____

Interstice Vent ○ Open ○ Pressure/Vacuum ○ Pressure Size: _____

5. Comments

The tank was located inside a building.

The tank had an 8-inch open vent. The open vent extended to the lower level of the tank.

The open vent was not vented outside the building.

1. Foundation — *Concrete Pad*

Anchorage: ○ No Anchors ○ Cable Tie Downs ○ Anchor Bolts
Number of Anchors: _4_ Size of Bolt (in) _1.00_ Height (in) _11.00_
Thickness of top plate (In) __ Thickness of side plate (In) __

Ringwall/Pad Dimensions: Distance from Bottom extension to edge (in) _5.00_ Min 7.00 Max
Distance from top surface to grade (in) _23.00_ Min _24.00_ Max

Support Dimensions: Number of supports: __ Space between Supports (in) __
Size of supports (in): __ Height of supports (in): __
○ No Pad Plate ○ Pad Plate ○ Stitch welded pad plate ○ Seal welded pad plate

2. Undesirable Foundation Conditions

☐ Grade against tank ☐ Washout ☐ Voids under tank ☐ Hairline Cracks in concrete
☐ Large Cracks in concrete (>1/8") ☐ Exposed rebar ☐ Discontinuous Ringwall
☐ Corrosion of supports ☐ Anchor Bolt Corrosion ☐ Bottom extension corrosion

3. Undesirable Area Conditions

☐ Obvious settlement ☐ Water Against tank ☐ Drainage toward tank ☐ Excessive debris
☐ Vegetation by tank ☐ Moss under bottom ☐ No Containment Dike/Wall
☐ Damaged Containment Dike/Wall ☐ Product residue ☐ Wet Product by Tank

4. Comments

The tank was located inside a building.

1. External Tank Shell *Welded*

☐ Seams Covered ☐ Rivets Unsealed ☐ Rivets Sealed ☐ Rivets Welded
☐ No Pad Plates Under Shell Brackets ☐ No Ice shields on All Item <2" ☐ Foam System

2. Coating Conditions

○ Like New ● Good ○ Fair ○ Poor ○ No Coating

☐ Peeling ☐ Cracking ☐ Thinning ☐ Rust Stained ☐ Primer Only ☐ Areas not Coated

Insulation Conditions ○ Like New ○ Good ○ Fair ○ Poor
○ Sprayed ○ Corrugated/ Banded ○ Smooth Metal ☐ Areas Removed
☐ Tears ☐ Damaged ☐ Holes ☐ Penetrations Not Sealed ☐ Wet under Insulation

3. Undesirable Shell Conditions

☐ Weld Seam Corrosion ☐ Weld Pinholes ☐ Arc Strikes ☐ Weld Porosity ☐ Weld Slag
☐ Weld Cracks ☐ Weld Undercut ☐ Lack of Fusion ☐ Holes in Shell ☐ Gouges in Shell
☐ Inactive Corrosion ☐ Active Corrosion ☐ Surface Corrosion ☐ Corrosion Damage
Deepest Shell Corrosion Found: __ Height above Grade __ ☐ Needs Evaluation

4. Shell Distortion and Buckling

☐ Peaking ☐ Banding ☐ Lower Shell Distortion ☐ Upper Shell Distortion ☐ Torn Plate
☐ Distortion around Nozzles/Repairs ☐ Minor Buckles ☐ Major Buckles ☐ Sharp Creases

5. Possible Improper Construction Practices

List Items Below

☐ Square Corner Inserts/Pads ☐ Lap Patches ☒ Unreinforced Penetration ☐ Split Repad
☒ No Telltale Hole in Repad ☐ Plugged Telltale Hole in Repad ☒ Improper Weld Space
☐ Insufficient Reinforcement ☐ Undersize Insert ☐ Cover Plate Thin ☐ Flange Thin
The repads of Shell Items C, I, and J did not have telltale holes.
The weld spacing of Shell Items C and G did not meet API standards
Shell Nozzles A, G, and H were over 2 inches in diameter and did not have repads.

6. Ground cables

Quantity _1_

☐ None Found ☐ Not Attached ☐ Broken ☐ Improper Attachment

7. Level Gauge **Manufacturer** _DP Hanjo_ **Product Height:** __ FT

☐ Float with Gauge ☐ Target Board ☐ Electronic ☐ Floats, Cables Guides not Attached
☐ Not Working ☐ Conduit damaged ☐ Needs Service

8. Top Angle Wind Girder

☐ None ☐ Toe In ☒ Toe Out ☐ Corrosion ☐ TA Weld Size Greater than 3/16”
☐ Damaged Welds ☐ Buckled ☐ Coating Failure ☐ Holds Water ☐ Buckled

Top Angle: Vertical (in) _2.50_ Horizontal (in) _2.50_ Thickness (in) _0.252_
Wind girder: Vertical (in) __ Horizontal (in) __ Thickness (in) __
Distance from Top of Tank (in): __

9. Shell Vents and Overflows

☒ None ☐ Indicator Holes ☐ Screens Missing/Damaged ☐ Over Stairway ☐ Geo Dome
Number of Vents: __ Size (in): __ Distance from roof (in): __
Number of Overflows: __ Size (in): __ Distance from roof (in): __

10. Comments

The coating on the external shell and appurtenances was in good condition.

1. Internal Tank Shell *Welded*

☐ Product Build-Up ☒ Product Residue ☐ Lower Shell Coated ☐ Entire Shell Coated
☐ Shell Not Inspected ☐ Shell Welds Not Inspected

2. Undesirable Shell Conditions

☐ Weld Seam Corrosion ☒ Weld Pinholes ☒ Weld Porosity ☒ Weld Slag ☐ Weld Cracks
☒ Weld Undercut ☒ Lack of Fusion ☐ Arc Strikes ☐ Holes in Shell ☐ Gouges in Shell
☐ Weld Burrs ☐ Minor Shell Corrosion ☐ Shell Corrosion Damage
Deepest Shell Corrosion Found: __ Height above Bottom __ ☐ Needs Evaluation

5. Possible Improper Construction Practices List Items Below

☐ Lap Patches ☐ Item Penetrates but Not Welded ☐ Hot Tap ☐ Drilled Hole for Coupling
☐ No Pads on Gauge Pole Supports ☐ No Pads on Datum Plate Supports ☐ Undercut
☐ Incomplete Shell Weld ☐ Lack-of-Fusion ☐ Cracked Weld ☐ Welds Not Visible

5. Internal Piping and Supports

☐ No Pads on Pipe Supports ☐ Pipe Support Welded to Both Pipe and Bottom
☐ Inadequate Pipe Supports ☐ Corrosion on Piping ☐ Broken Welds ☐ No Diffuser
☐ No Suction Trough ☐ Center Suction / Fill ☐ Has Floating Suction Line

6. Comments

There was product residue on the internal shell.

There was a pinhole in the internal weld of Shell Item E. There was undercut and pinholes in the internal welds of Shell Items F.

Isolated Topside pits can be puddle welded or patched.

TS = Tombstone shaped

Summary

The tank was located inside a building. The open vent extended to the lower level of the tank. The open vent was not vented outside the building.

The tank had an 8-inch open vent. **A UL tank of this size would require a 10-inch emergency pressure vent per UL 142, Table 8.1.**

The coating on the external shell and appurtenances was in good condition. **This should be monitored at future inspections.**

The repads of Shell Items C, I, and J did not have telltale holes. **Consideration should be given to drilling and tapping telltale holes in the repads, pressure testing the neck and repad welds.**

The weld spacing of Shell Items C and G did not meet API standards. **Since the tank shell is 0.5 inches or less in thickness, no corrective action is required.**

Shell Nozzles A, G, and H were over 2 inches in diameter and did not have repads. **Since the shell thickness is over twice the required thickness no action is required.**

There was a pinhole in the internal weld of Shell Item E. There was undercut and pinholes in the internal welds of Shell Items F. **Consideration should be given to weld repairing these areas.**

The coating on the external roof and appurtenances was in like new condition. **This should be monitored at future inspections.**

There was a patch plate located on the underside of the tank and welded to the topside. **This should be monitored at future inspections.**

A visual inspection was performed on the tank bottom to locate topside pits 0.100 inches deep and deeper in the bottom plates and 0.080 inches deep and deeper in the critical zone (within three inches of the shell) for a 5-year inspection interval. There were no pits detected below the thresholds. **No action is required.**

A Magnetic Flux Leakage (MFL) scan was performed on approximately 100 percent of the tank bottom at a remaining wall threshold of 0.150 inches thick in the bottom plates and 0.170 inches thick in the critical zone (within three inches of the shell) for a 5-year inspection interval. There were three areas of soilside corrosion below the thresholds. One repair area wase located in the critical zone. These areas were marked for repair. The lowest readings were 0.130 inches and located on Bottom Plate 2. **The corroded areas were patched per API 653 standards. The tank should be reinspected internally in 2026 and reevaluated.**

Ultrasonic Edge Scrubs (UES) were performed around the entire circumference of the tank. The thicknesses ranged from 0.150 to 0.260 inches. Corrosion below the thresholds was found. **The corroded areas were patched per API 653 standards.**

The dish-shaped sump was 36 inches in diameter and 14 inches deep. The thicknesses ranged from 0.340 to 0.355 inches. No corrosion was detected. There was product in the sump.

An ultrasonic thickness reading was taken at random on each bottom plate. The thickness readings were 0.240 and 0.248 inches.

A settlement survey was not performed.

Inserv utilizes certified inspectors (STI and API-653) to perform small tank inspections in compliance with industry standards such as SP001 and API-653. The tank was categorized and inspection intervals determined per STI's SP001, 5th Edition, Table 5.5.

Tank DVOP8 had a capacity of 35,291 gallons, a containment area and a CRDM (RPB, concrete pad), making it a Category 1 tank. The tank still requires periodic inspections by the owner's inspector per SP001. **The next inspection required by is an internal inspection due in 2026.**

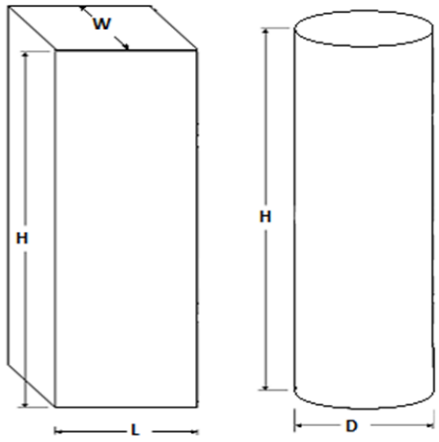
Vertical Tank Thickness and Venting

(Not under pressure, Hydraulic head pressure only)

Inputs:

No		Rectagular Tank?
No		Elevated Tank
No		Stainless Steel Tank
42.00	(ft) H	Tank Height
12.00	(ft) D	Tank Diameter
0.70	E	Joint efficiency (use 1 for butt weld, 0.70 for lap welds)
23600	S	Allowable stress (Use 23600 if unknown steel)
62.4	lb/cf	Density of product (use 62.4 for water if unknown)
42	(ft) Hp	Height of product when full (inside tank shell)
0.245	(in) Tsm	Measured minimum thickness on shell
0.247	(in) Trm	Measured minimum thickness on roof
0.155		

5.98 (ft) Ri Inside radius



Tank Properties

35291.71	Gal	Tank Capacity
1130.97	sq ft	Wetted area per UL-142
18.20	P	Internal Hydraulic Pressure (P= H(lbs/cf)/144)

Shell Circumferential Stress (longitudinal Joint) Note:1

0.167 (in) Tsl — Required thickness = 12*P*Ri/(S*E-0.6*P) or 0.167 inches min per UL-142

Shell Longitudinal Stress (Circumferential Joint) Note: 1

0.167 (in) Tsc — Required thickness = 12*P*Ri/(S*E-0.4*P) or 0.167 inches min per UL-142

Required Venting

4.00	(in)	**Minimum Normal Vent per UL142 Table 8.2 Note:3**
10.00	(in)	**Minimum Emergency Vent per UL142 Table 8.1 Note:4**

Shell Thickness evaluation per STI-SP001 4th Ed. Section10

0.167	(in) Tsr	Required shell thickness Maximum of Tsl and Tsc
0.245	(in) Tsm	Measured thickness

Shell Thickness is Okay all Categories	0.1253	75% of required thickness
Shell Thickness is Okay Category 1	0.0835	50% of required thickness
Shell Thickness is Okay Category 1	0.0418	25% of required thickness

Roof Thickness evaluation per STI-SP001 4th Ed. Section10

0.123	(in) Trr	Required roof thickness
0.247	(in) Trm	Measured roof thickness

Roof Thickness is Okay all Categories	0.0923	75% of required thickness
Roof Thickness is Okay Category 1	0.0615	50% of required thickness
Roof Thickness is Okay Category 1	0.0308	25% of required thickness

Dear Mr. Martin:

Congratulations on passing STI SP001 Adjunct online certification course. Below is your STI Inspector identification card and certificate. We suggest that you print this page and:

- Cut out and laminate the ID card
- Frame the certificate

If you have any questions about this or any field related inspection, please feel free to call Joseph Mentzer, STI Project Engineer, at (224) 286-6469.

STI/SPFA
Aboveground Tank Inspector
Certification Program
847/438-8265

Name: **James Martin**
STI Inspector No: **AC 44355**
Expires: **August 23, 2024**

The person to whom this card has been issued has met the requirements to attain the STI SP001 Adjunct Certification for API 653 Inspectors. This certificate is dependent on an active API 653 certification.
